

ORANGE COUNTY FAIRGROUNDS

is the Official Emergency Evacuation Center in case of nuclear meltdown at the SAN ONOFRE Nuclear Power Plant.

San Onofre is located less than 30 miles from the Fairgrounds. However, the U.S. Nuclear Regulatory Commission (NRC) recommended U.S. citizens in Japan evacuate at least 50 miles from the March 11, 2011 Fukushima nuclear disaster.

WE HAVE LIVED WITHOUT NUCLEAR POWER since

January 31st when a defective steam generator tube ruptured, leaking radiation into the air. **No blackouts** are expected with the plant off-line -- we don't need San Onofre for energy.

WHY WE MUST STOP EDISON FROM RESTARTING SAN ONOFRE

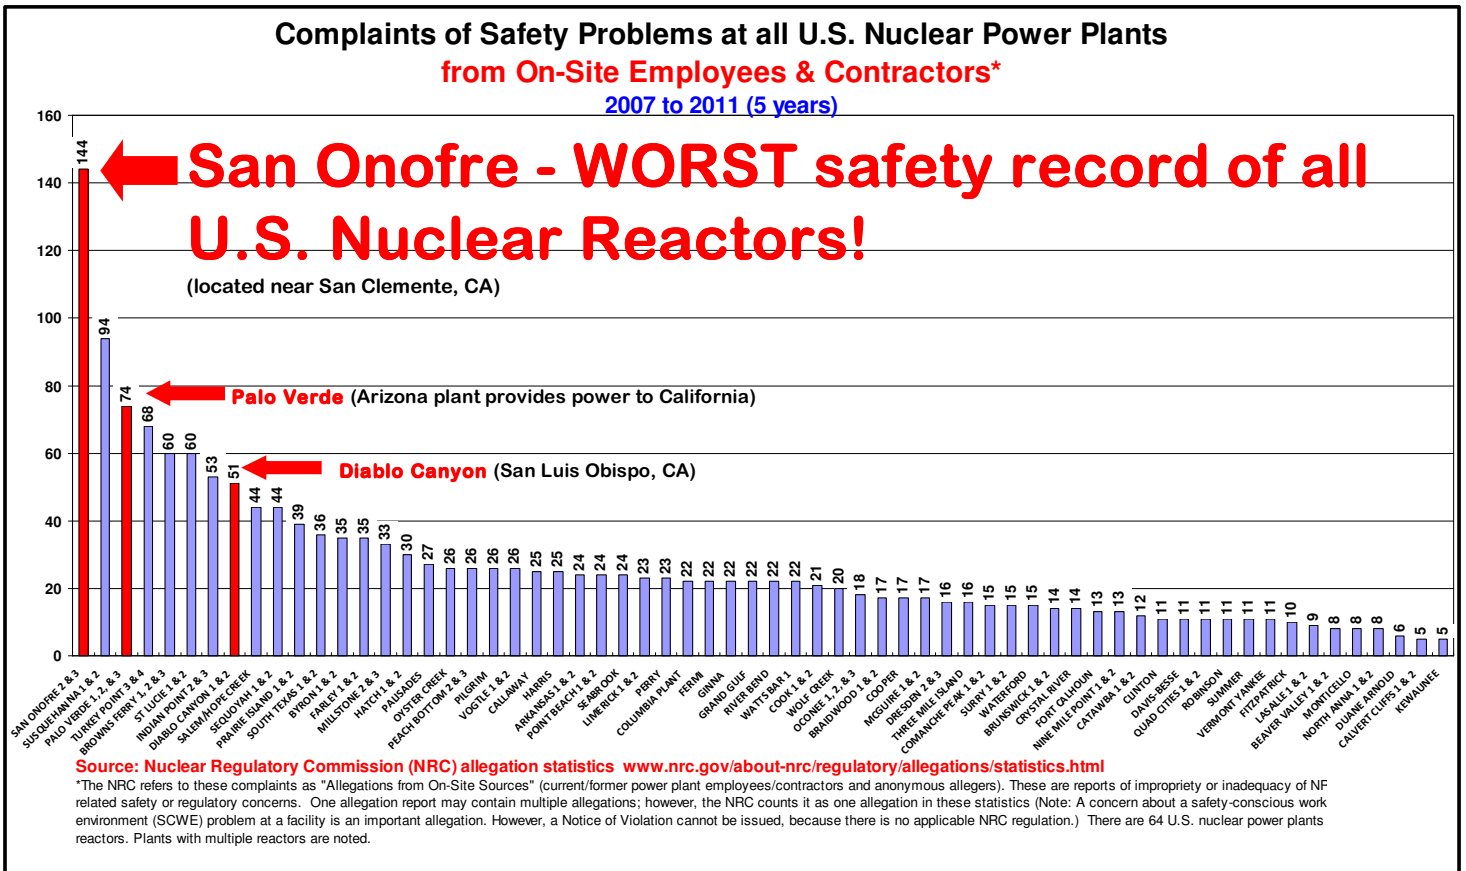

Children tested for radiation near Fukushima Daiichi nuclear plant.

- **We were close to a disaster of the worst kind**, and yet EDISON wants to restart after making a few repairs and see what happens. However, **the only way to know if running generators are failing is if they leak radiation**. NRC data shows these are the worst steam generators in U.S. history!
- **San Onofre continues to have the worst safety record** of all U.S. nuclear power plants (see chart on back).
- **San Onofre was designed for a 7.0 earthquake, but U.S. geologists say we are overdue for an 8.0+ earthquake.**
- **No safe emergency plan**
 - **Emergency Plan A (nuclear meltdown caused by something other than an earthquake)**
 - Leave your kids at school, and start making your way north to the fairgrounds.
 - Buses will extract your little ones from school so you can be reunited at the fairgrounds, about half the distance from the plant to the so-called "safe zone".
 - Your pets will not be allowed, so don't bother trying to bring them along.
 - You will be stripped to your underwear, showered, and scrubbed.
 - Whatever you brought with you is all you'll have to start over again because nothing can be insured against radiation contamination, and you won't be going home for decades... if ever.
 - **Emergency Plan B (nuclear meltdown caused by an earthquake)**
 - Travel will be impossible, so you will need to **"SHELTER IN PLACE"** (aka **"YOU ARE ON YOUR OWN"**) until help arrives with food, water and medical relief. FYI... cars don't protect you from radiation.
 - They say to be able to last at least 3 days, (but more realistically, it would take weeks). Are you ready for that at home? Do you have that much food and water and medications on hand?
 - Have duct tape and plastic sheeting on hand to seal doors, windows or vents in case a radiation plume is passing over. **Suffocation could occur if you keep the shelter tightly sealed for more than a few hours.**
 - Do not go outside for any reason until help arrives or notified it is safe!

For more government and scientific facts and to find out how you can help, go to: www.SanOnofreSafety.org and contact gary@sanclementegreen.org to get regular updates.

TOGETHER, WE CAN KEEP THIS DANGEROUS PLANT FROM RESTARTING

Worst safety complaint record of all U.S. Nuclear Reactors in nation!

Worst record of defective steam generators in nation!
